Martin on his WebCommunicator

🔍 BLF state due to full integration

Let's demo

Norbert on the native mobile

VPN calling
Extension calling

Martin on his WebCommunicator

Native mobile integration key benefits

- No app needed
- No push service needed
- Native dialler use
- Learning curve

- The cell phone was chosen as the no1 communication device

...still fully integrated into the CloudPBX

Who it's for

- Remote workers
 - Full UC access without any add-on
- Frontline workers
 - Business Line on personal device
- Contractors / Freelancers
 - Separate Business ID
- Hybrid Teams
 - One number, seamless handovers
- Deskless employees
 - Field, retail, logistics (on the go)
- Global travelers
 - ~40 roaming countries

Native Mobile integration made even more easy

What if

- Scanning a QR Code will integrate your mobile phone into your professional communication environment?

Sammy Smart has a new device now

Compliance recording !

Call Center Agent

Cloud PBX features

With Communi5 MobileControl

- Enterprise phonebook
- Manage your account
- GSM transfer
- etc.

Easy Onboarding workflow

Service Provider

- Onboarding with Communi5
- Managing a pool of network branded eSIMs

Enterprise

- Purchase of eSIM feature(s)
- Assign the feature to UCaaS Subscriber(s)

Subscriber

- Receiving onboarding information
- Scanning of Q/R- Code
- ~3 min patience until eSIM is installed on the mobile

Different Bundles available

Unlimited voice
Background data only

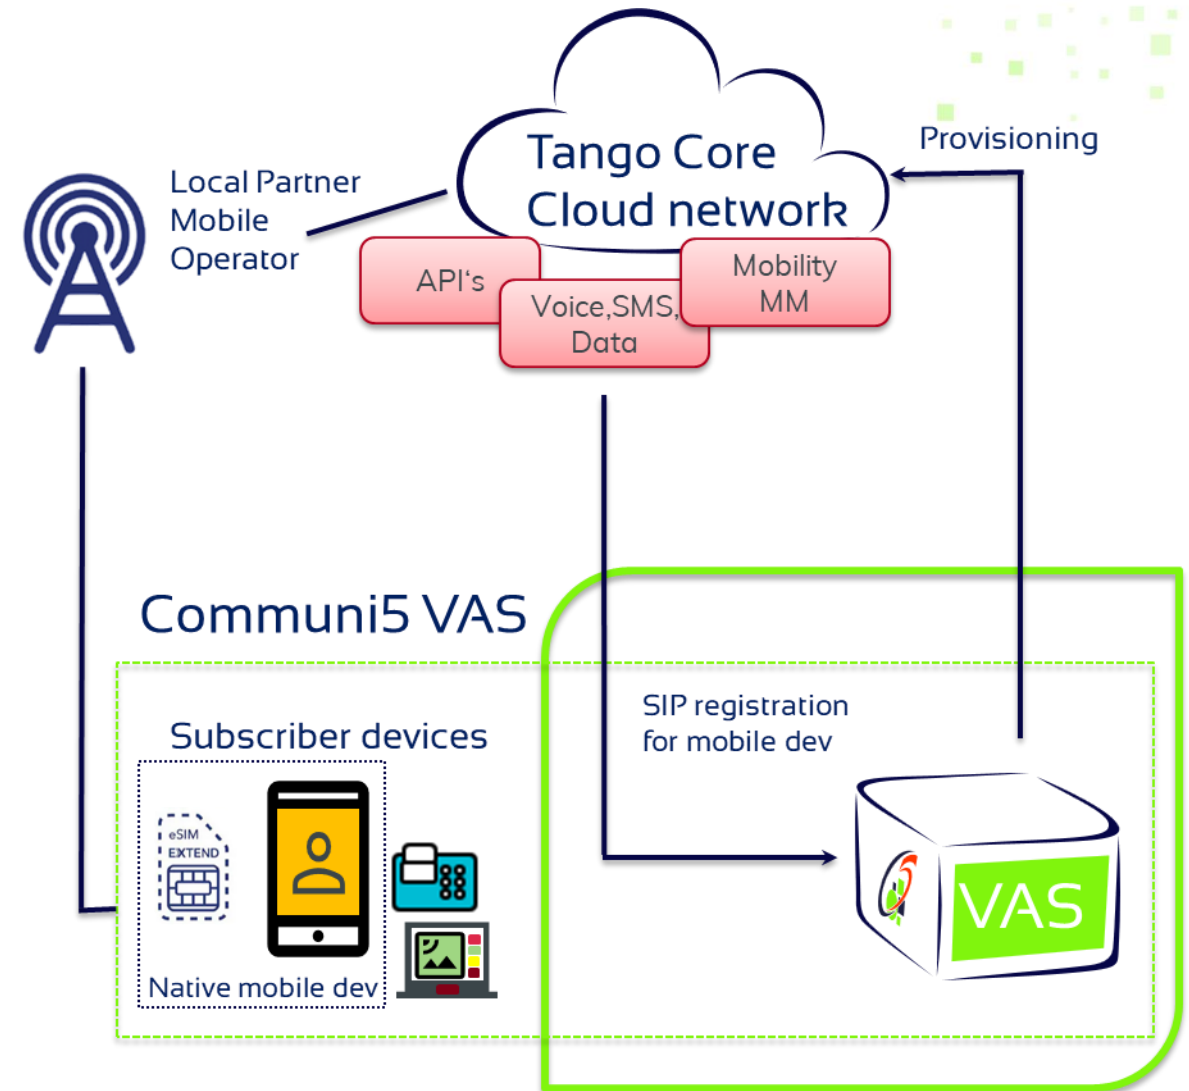

Unlimited voice
+ data package

The eSIM provides the complete business identity on the mobile device
Bring Your Own Device

Mobile Extension with eSIMs

How it works

- Native Mobile integration without becoming MVNO/MVNE
- Tango Networks provides an MVNE function that acts like a gateway between the Communi5 Voice Application Server and the mobile Device
- Tango registers the mobile phone like a standard SIP Phone on the VAS
- The Communi5 VAS is still the leading Call Control platform → all relevant features including BLF, Recording etc. will work
